

# Index Seminum Product Sheet

**Iris - Botanical Garden**  
Professional Botanical Software

## Overview

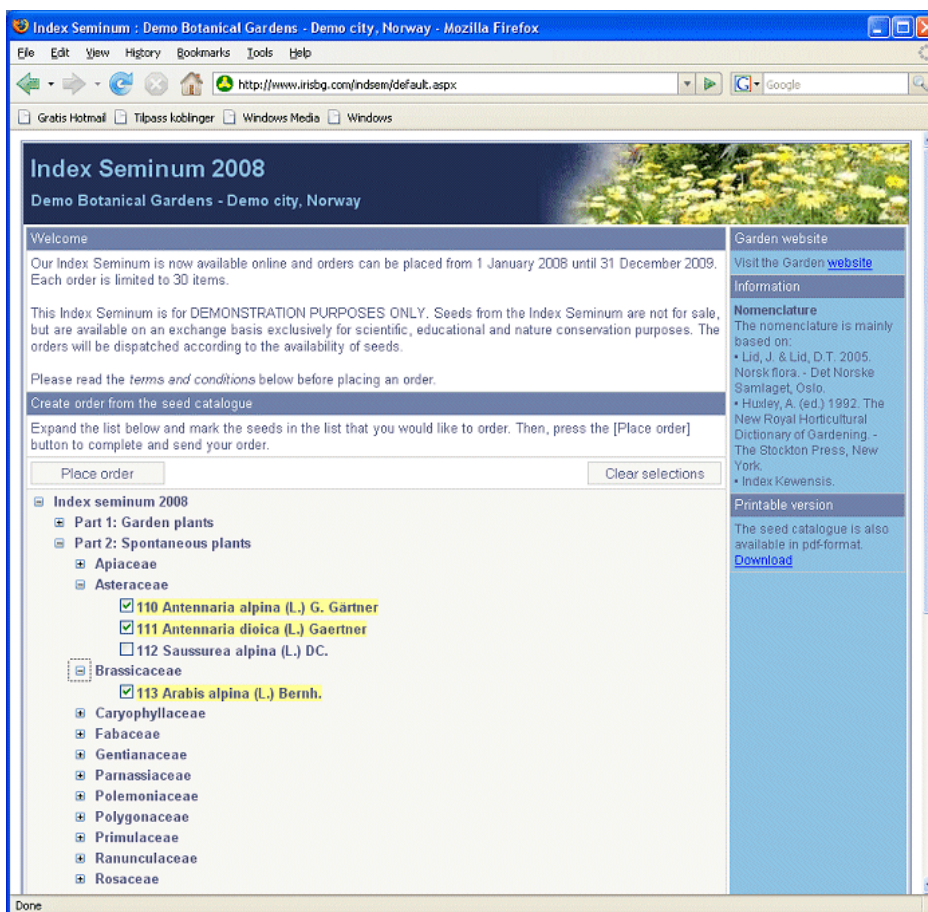

*Index Seminum* is a web-based module that provides an easy way to publish the garden's seed catalogue on the internet and lets contacts or customers place seed orders directly on the web.

## Features

- This module is fully integrated with *Iris - Botanical Garden*, but can also be supplied as an independent solution.
- The seed catalogue and customer list are uploaded as xml-files. These can be created in *Iris - Botanical Garden*.
- The seed catalogue is presented in a

hierarchical fashion for easy navigation and selection.

- The appearance of the user interface, information texts, the opening period, order limit, etc., can easily be configured.
- There is an option to restrict access to predefined customers only.
- A confirmation e-mail is sent to the customer when an order is completed.
- The order can be sent by e-mail to the garden or received directly in *Iris - Botanical Garden* through a web service.

## Architecture and requirements

The *Index Seminum* module is built with Microsoft ASP.NET 2.0 and Ajax. Data upload and maintenance are performed through an administrator page. Supported on Microsoft Internet Information Services.
