

Easy to use

All members of staff will quickly become comfortable with the system.

Flexible

With the clever use of modules you can decide which parts of the program are applicable to your collection. You can simply choose those parts which suit your requirements. If you need the map module or the add-on seed ordering system – you just plug it in to your base system.

Affordable

We are committed to providing quality technology at an affordable price.

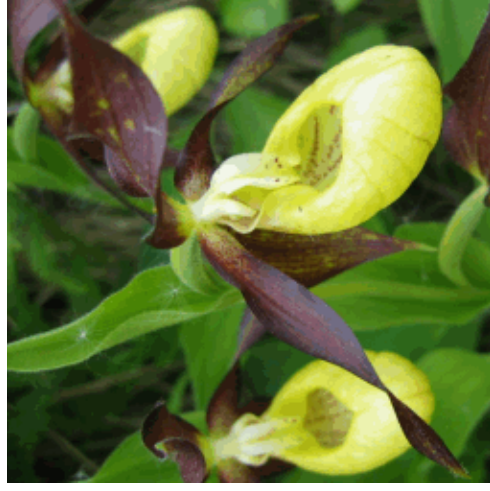

Scalable

From a single user site to an unlimited site licence, we have a solution for every size of collection and budget.

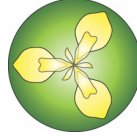

“Iris BG is extremely intuitive and easy to use for all members of staff.”

“The support and service we have received from Iris Botanical Garden over the past ten years have been exemplary.”

Support

Retrieve data easily with comprehensive reporting.

Bespoke transition of data from legacy systems.

Sophisticated data entry saves time and ensures data integrity – e.g. a change in a taxon is reflected in all relevant accessions.

Iris BG is developed for the Windows platform and runs on widely available databases.

Most users require little or no support. Web forum available for peer to peer support.

“The transition from our old card index system was simple, painless and very productive.”

Finn Ervik,
Managing Director, Stavanger Botanic Garden & Rogalands Arboretum
